Oral Motor Rehabilitation

Silver Tracheostomy Tubes

- Kapitex have for many years been supplying silver tracheostomy tubes into the NHS and to overseas customers.
- The main model of tube supplied is the Negus style – this comprises a built in speaking valve.
- Kapitex only sources from the key silver tube manufacturer in the UK. ALL components are suitable for medical applications and are to British Standards. **Please note: The silver tubes are produced from sterling silver.**
- Quality is paramount - we do not supply silver plated or non silver metal tubes.

The Negus Silver tube set comprises of the following:

- Outer tube with neck flange
- Inner tube with speaking valve incorporated
- A spare non-valved inner cannula
- Introducer

Design features:

- 1) The introducer is small and rounded to ensure a comfortable introduction of the tube into the tracheostoma.
- 2) The neck flange is designed to ensure that movement of the neck is comfortable – without the tube 'digging' in.
- 3) The speaking valve is situated in the inner cannula housing, this enables the tube to lie flat against the neck. The benefit is there is no protrusion of the speaking valve – unlike some systems which have speaking valves sticking out on the tube adaptor.
- 4) One of the key benefits of a silver tube is the thin wall thickness (within the overall diameter). Allowing maximum airflow into the airway, unlike some thicker plastic or silicone tubes.
- 5) Silver tubes are often seen as an economical long term tube.
- 6) A customised service from Kapitex is available on application.

Order number	Description	FG	Length* (mm)	O.D.** (mm)
